

## Vibration Testing Noise and Vibration Analysis Data Acquisition Test Stand Engineering

## Some m+p Facts

Leibniz Universität Hannover

- Founded in 1980 as spin-off of the Institute of Mechanics at Leibniz Universität Hannover, Germany
- Long expertise and experience in vibration testing, structural analysis, process monitoring and test stand engineering
- Significant market share in key industries
- m+p international headquarters in Hannover
- Sales & support subsidiaries in Verona/New Jersey, Farnham/UK, Montesson/France and Beijing
- Representatives and agents worldwide

# Why So Many Engineers Rely on m+p international

## Full-Service Provider of Test and Measurement Systems

In the lab, in the field and  
on the production floor

## Complete Solutions

Conception and planning,  
implementation, installation and  
full-operational support,  
customized test rigs

## High-Quality Products

Excellent performance,  
reliability, stability, longevity  
and repeatable results

## 40 Years' Expertise and Experience

Experienced team of engineers,  
continuous research and development,  
state-of-the-art hardware and software tools

Satellite testing at Airbus Defence and Space, UK

- **m+p VibControl** products for sophisticated vibration testing from 4 to 512 channels
- Simple for production, advanced for development; standalone or networked
- All test standards supported from standard random testing to time domain replication, mixed mode testing and drop table capture, MIMO control
- Measurement hardware for all testing needs
- Acoustic control in reverberation chambers
- Supplier of complete test stands including shakers
- Technical leader in vibration and acoustic control applications

In-car operation using m+p Analyzer  
and m+p VibPilot

- **m+p Analyzer** for noise and vibration testing applications
- Measurement, analysis and reporting in one package
- Import of 3<sup>rd</sup> party files
- NVH applications: real-time FFT, time history data acquisition, structural testing, modal analysis, impact testing, rotating machinery, acoustic analysis, environmental vibration testing
- Mobile, laboratory and network based
- Compatible with wide range of sensors and signals for future-proofing
- Standard hardware from ultra-portable frontends to high-channel count systems

Structural testing of an airplane

- **m+p Coda**, the full-featured software platform for continuous data acquisition, signal analysis, real-time monitoring, visualization and documentation
- From tens to thousands of channels
- Mobile and stationary data acquisition, also standalone
- Applications: measurements (temperature, strain, pressure, force, fluid level, flow), testing (turbines, engines, pumps), evaluation (temperature/strain/stress distribution of mechanical structures)
- Intuitive GUI, client/server system, standardized data interfaces, SQL database-supported management, real-time limit checking and alarm monitoring
- Acquisition hardware: Ethernet, LXIbus, VXIbus, USB

## Custom-Made Solutions for Functional Test Stands

- High-frequency vibration test stand, Volkswagen
- Airbag electronics test system, Autoliv
- Vibration absorber test stand, Daimler
- Light bulb test stand, Volkswagen
- Carbon canister conditioning and test systems, IDIADA Automotive
- Antenna measuring range software, Airbus Defence and Space
- Data acquisition and monitoring at turbomachinery test facility, Siemens

- Overview Closed-Loop Vibration Control
- Hardware: m+p VibPilot, m+p VibRunner and m+p VibMobile
- Software Features and Test Modes
- Applications
- Advanced - Time Data Recording (Throughput)
- Advanced – Notching/Force Limited Vibration Testing (FLVT)
- Advanced - Mixed Mode (SoR, RoR, SoRoR)
- Advanced – Multi-Sine
- Advanced - Acoustic Control for Reverberant Chambers and PWT

- **m+p VibPilot**  
4, 8, 12 or 16 channels,  
compact, rugged housing,  
USB and Ethernet interfaces
- **m+p VibRunner**  
high-channel count 8-512 channels,  
standalone or 19" rack mounting,  
high-speed 1 Gbit/s Ethernet interface
- **m+p VibMobile**  
up to 8 m+p I/O boards and  
4 CompactPCI® Serial boards,  
robust steel housing,  
high-speed Ethernet interface

# m+p VibControl Hardware

## m+p VibPilot

### Compact Acquisition Hardware

- All-in-one device for vibration testing, N+V analysis and data acquisition
  - Supports m+p VibControl, m+p Analyzer and m+p Coda S/W
  - Synchronisation of two m+p VibPilot frontends, hence hardware redundancy
- Input channels: 4, 8, 12 or 16
- Drive and COLA output
- Use on the bench and in the field
  - For a multitude of industrial conditions
  - AC/DC power flexibility
  - Battery option
- Latest IC technology
  - High-precision measurement
  - Outstanding real-time performance

# m+p VibControl Hardware

## m+p VibPilot

### Key Features

- 4 or 8 input channel per frontend
- Up to 16 input channels with clock sync
- AC/DC/ICP sensor conditioning with TEDS support
- 204.8 kHz simultaneous sampling, 24-bit A/D
- 2 sources, safety shutdown, 2 tachometer inputs
- AC/DC supply, 20 W power consumption
- Compact, dust-proof, rugged housing
  - Dimension (w x d x h): 211 x 190 x 53 mm
  - Weight: 1.57 kg
  - Fan-less, noise-free operation
- 8 digital inputs, 8 digital outputs
- USB and Ethernet host interfaces

# m+p VibControl Hardware m+p VibRunner

## High-Performance and Cost-Effective Acquisition Hardware

- Designed for the specific needs of dynamic measurements
  - Supports m+p VibControl, m+p Analyzer and m+p Coda S/W
- Up to 24 input channels per module
- Multiple sources and tacho inputs
- Bridge module for strain measurements
- 19" mainframe: standalone or rack mounting
  - Flexible system configuration
- Multiple m+p VibRunner synchronization
  - Distributed daisy chain connection (to 100 m)
  - High-channel count measurements, expandable
  - Minimum transducer cabling
- 1 Gbit/s Ethernet interface, independent subnet
  - High data throughput, safe communication

Synchronisation of five  
m+p VibRunner frontends

### Key Features

- Standalone or 19" rack mounting, 1 U, 3 slots, BNC connectors
- Internal multi-range AC and external DC power supply
- Synchronization by means of daisy chain and master clock
- 1 Gbit/s Ethernet interface
- 8 - 24 analog input channels per m+p VibRunner, 24 bit, 204.8 kHz max. sampling rate
- True differential and single-ended user selection
- AC/DC/ICP sensor conditioning, TEDS support
- 2 - 12 floating source output channels per m+p VibRunner, safety shutdown
- 8 digital inputs and 8 digital outputs per m+p VibRunner
- Silent operation, temperature-controlled fan (can be turned off)

# m+p VibControl Hardware m+p VibRunner

**Institute 511, First Launch Academy, Beijing**

## **Key Features**

- 2 x 19" rack mounting, TOTAL 456 input channels, 8 output/DAC channels
- Applications:
  - Sine & random data reduction with continuous throughput (**32.7 kHz/channel**)
  - Modal analysis with modal shaker and impact excitation

### Mobile Multi-Channel Front-End

- Standalone or 19" rack mounting,  $\frac{3}{4}$  19" wide, 4U high
- Up to 8 m+p VibMobile boards totaling 64 channels and up to 4 freely selectable CompactPCI® Serial boards per mainframe
- Max. 204.8 kHz simultaneous sampling, max. 10 MHz with 3rd party CompactPCI® Serial board
- DSP powered real-time processing
- Ethernet interface, 1 Gbit/s transfer rate
- Robust steel housing
- Silent operation, temperature-controlled fan
- Strain gauge measurements

- Overview Closed-Loop Vibration Control
- Hardware: m+p VibPilot and m+p VibRunner
- Software Features and Test Modes
- Applications
- Advanced - Time Data Recording (Throughput)
- Advanced – Notching/Force Limited Vibration Testing (FLVT)
- Advanced - Mixed Mode (SoR, RoR, SoRoR)
- Advanced – Multi-Sine
- Advanced - Acoustic Control for Reverberant Chambers and PWT
- Summary

## Key Features

- **True multi-tasking system**

Parallel use of test definition, test run and post-processing

- **Multi-language support**

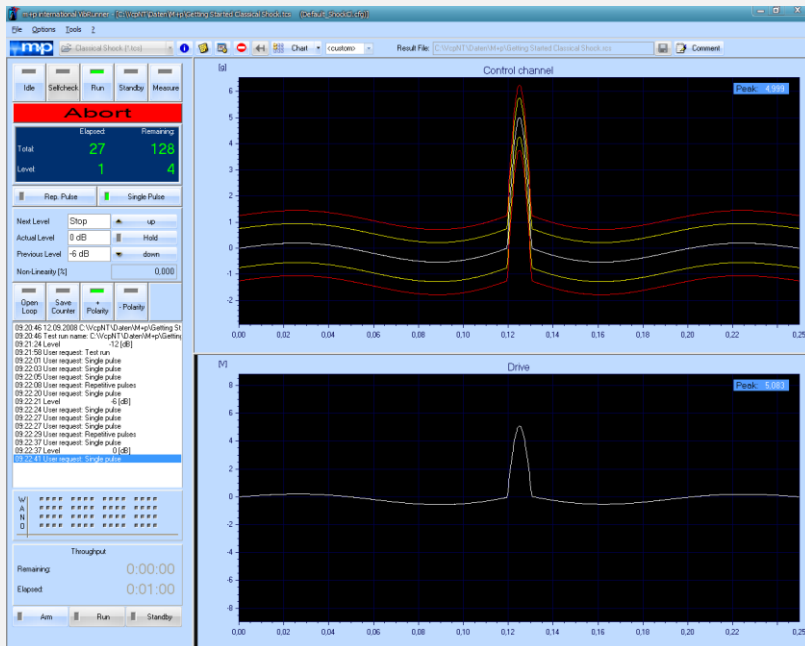

- U/I and online manual in English, German, French, Chinese and Russian
- Define and run all tests in English, create reports and plots in any of the above languages

- **Easy-to-use, clear software concept**

- Test definitions with shaker feasibility check
- Test run with predefined layouts, 1-16 online displays, up to 64 traces/screen, online comparison of previous test runs, multi-monitor support
- Automated test reports in Word, data export: Word, Excel, UFF, ASCII
- Multiplot analysis of different test runs
- Analysis of test result after years with date/time stamp, restore original test definitions

- **Common m+p VibControl U/I across all m+p VibPilot, m+p VibRunner and m+p VibMobile front-ends**

## Test Modes Fully Compliant with ISO, DIN, MIL-STD 810, etc.

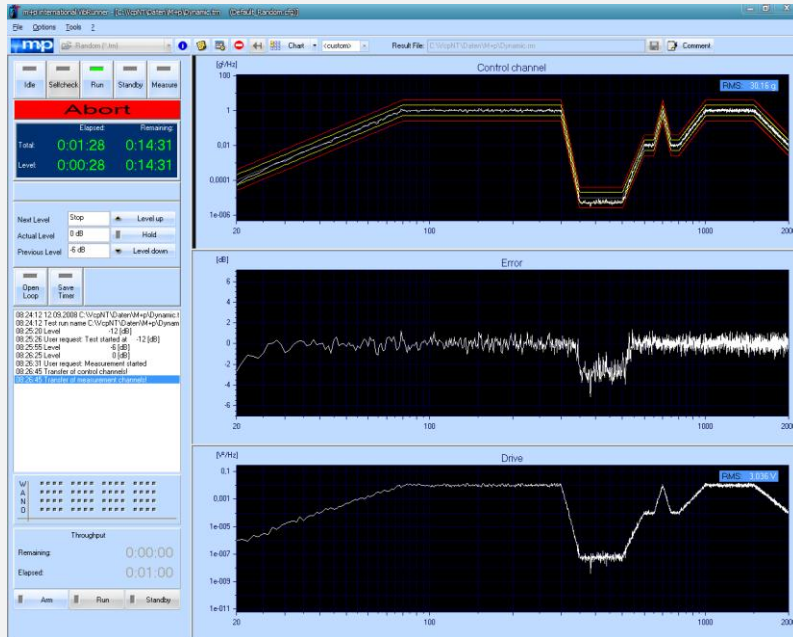

- Sine swept and stationary incl. notching/force limiting
- Multi-sine
- Sine resonance search, track & dwell
- Sine data reduction
- Random incl. notching/force limiting
- Random data reduction
- Classical shock
- External pulse
- Shock Response Spectrum (SRS)
- Transient capture with SRS calculation
- SoR, RoR, SoRoR
- Time domain replication (road load)
- Time history recording, throughput
- Multi-axis vibration control, MIMO

### Sine

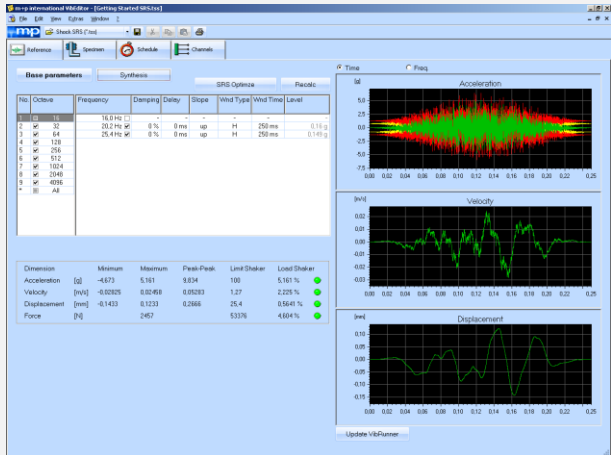

- **Sine swept and stationary with notching, force limiting (FVLT)**
  - Frequency range: 20/40 kHz
  - Control on acceleration, velocity, displacement and force
  - Sine data incl. magnitude and phase to perform ODS analysis
- **Sine resonance search, track & dwell**
  - Control criteria: fixed frequency, fixed phase, defined phase, auto phase, peak amplitude, high cycle fatigue
- **Sine data reduction**
  - Track and online analysis of measured or tape recorded data with COLA signal 1 Vpk

# m+p VibControl Software Test Modes

## Random

- **Random incl. notching/force limiting**
  - Frequency range: 12.8 kHz (standard)
  - FFT resolution up to 25,600 lines
  - Up to ten profiles per test setup
- **Random data reduction**
  - Online analysis of random data

## Shock

- **Classical shock**

- Half-sine, haversine, sawtooth, triangle, rectangle, trapezoid
- Auto-reverse of drive for positive and negative shocks
- Accelerometer negative sensitivity definition

- **External pulse**

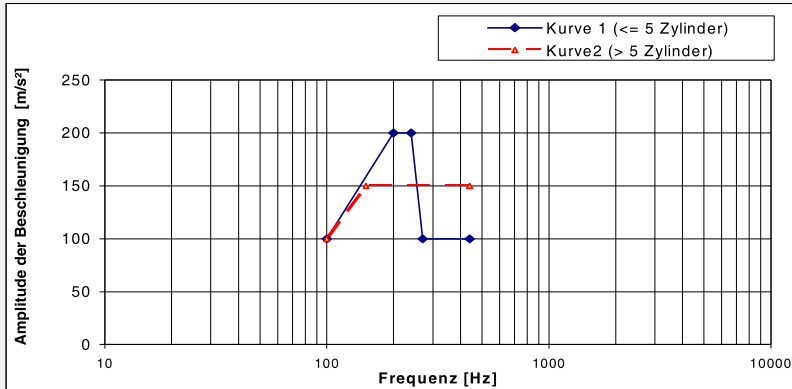

- Synthesis of any pulse form
- Short transient history control up to 64 seconds

- **Shock Response Spectrum (SRS)**

- Frequency range: 20 kHz
- Octave analysis: 1/1 – 1/24
- Sine burst and sine beat with variable amplitudes

- **Transient capture with SRS calculation**

- For pyroshock (non-shaker) applications with high “g” hammer/tap impact or other excitation
- Transient capture from drop shock machines, etc.

Sine vibration profile for engine components

Random vibration profile for engine components

VW 80101: SoR engine components

## Mixed Test Modes

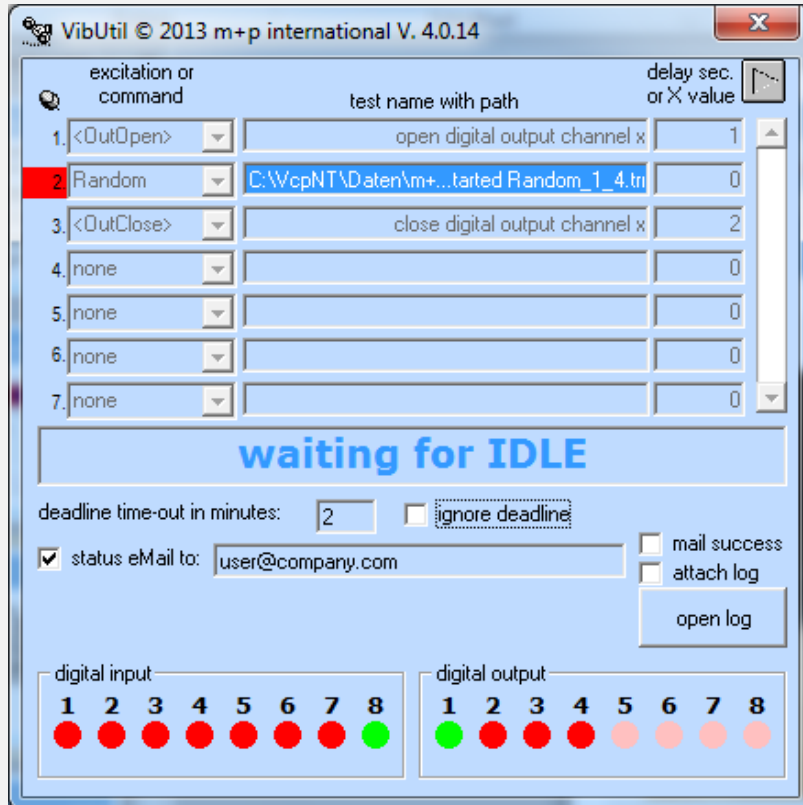

- **Sine-on-Random (SoR)**  
Independently sweeping or fixed sine tones are overlaid onto a random background
- **Random-on-Random (RoR)**  
Independently sweeping or fixed narrowband random signals are overlaid onto a random background
- **Sine-on-Random-on-Random (SoRoR)**  
Sine-on-random is combined with random-on-random

## Unlimited Time Domain Replication

- Example: Road load simulation
- Create life cycles from different test runs
- Includes “Road Load Editor” for kinematic shaker feasibility
  - Resampling of test data
  - Remove DC-offsets & overloads
  - Increase/decrease levels
  - Low- and high-pass filter
  - Copy & paste sequences
- Create PSD from time domain data and import into random control

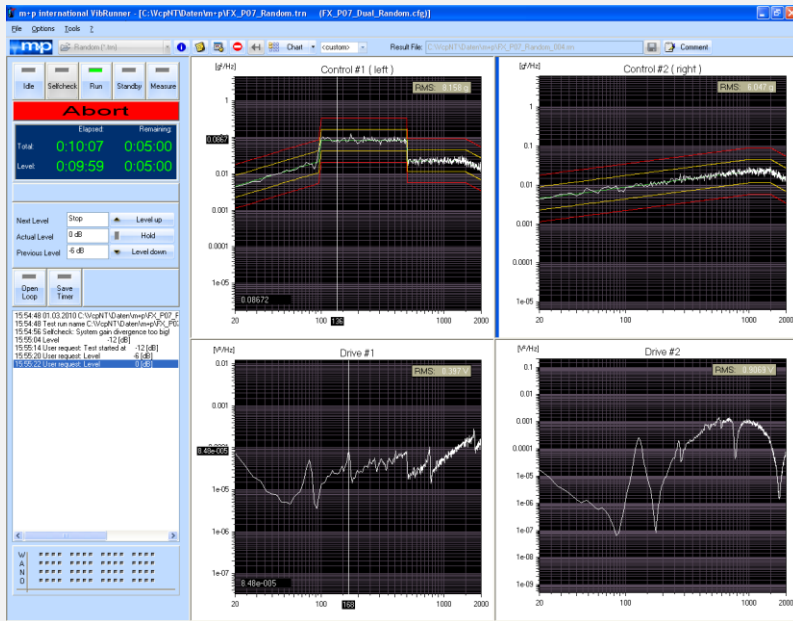

## Advanced VibUtil

- Automation of vibration tests
- Automation of combined climatic and functional testing
- Test status report sent via email or via SMS
- Digital inputs and outputs interface to climatic/temperature chamber
- Switching off chamber, shaker's power amplifier during vibration test standby

# m+p VibControl Software Test Modes

## Multi-Axis Vibration Control

- Sine, random, shock, time domain replication (x, y, z)
- Electrodynamic or hydraulic shakers
- Applications:
  - Road load simulation
  - Testing of large structures e.g. automobiles, aircraft, railroad cabins
  - Earthquake simulation (IEEE 344)
  - Transport simulation, e.g. portable PC's or automotive components
- m+p VibRunner hardware frontend

- Overview Closed-Loop Vibration Control
- Hardware: m+p VibPilot and m+p VibRunner
- Software Features and Test Modes

- Summary

### Features and Benefits Time Data Recording – Throughput

- Time domain data (acceleration, velocity, displacement, force vs. time) include all signal information from test start to test end
- Time domain data can be post-processed to get spectra in frequency domain (acceleration, velocity, displacement, force vs. frequency) at any time
- When damages occur or at test failures, time domain data provide answers in milliseconds to show what went wrong
- Time domain data can be replayed at any time for post-processing with different FFT settings, e.g. block size or filter, RMS, peak estimators in sine testing
- Time domain data can be given to customers for further post-processing

sine data reduction

## **Continuous, Seamless Recording of Time Domain Data Using Just ONE Vibration Control System Offers a Number of Benefits such as:**

- No additional hardware (data acquisition systems, tape recorder) required
- Avoiding errors, no synchronization with data acquisition system
- No double channel assignment, thus reduced cabling work
- Efficient operation – just one operator required
- m+p offers vibration control systems with 4 - 256 input channels

### Problem: Overtesting of Components

Complete system test

Supplier component test

Courtesy: Astro- und Feinwerktechnik, Berlin-Adlershof

### Method of FVLT

- Control on acceleration with limiting on forces as real test method to avoid component overtesting, hence R&D cost reduction
- FVLT considers impedance behaviour of shaker/fixture/specimen
- Required force limit definitions can be calculated or are available from FE calculations, real measurements or tests
- Development of method “Force Limited Vibration Testing” by Dr. Terry D. Scharton NASA-JPL in early 1990's

VW 80101: SoR engine components

- Overview Closed-Loop Vibration Control
- Hardware: m+p VibPilot and m+p VibRunner
- Software Features and Test Modes
- Applications
- Advanced - Time Data Recording (Throughput)
- Advanced – Notching/Force Limited Vibration Testing (FLVT)
- Advanced - Mixed Mode (SoR, RoR, SoRoR)
- Advanced – Multi-Sine
- Advanced - Acoustic Control for Reverberant Chambers and PWT
- Summary

### Method

- A test method used in automotive to reduce sine testing time, hence cost reduction
- Multi-sine is similar to a standard sine test, but several sine tones are sweeping at the same time over a frequency interval with 1 Oct./min.
- Testing time is reduced by normal sine test time divided by no. of sine tones
- Method requires large shaker forces because acceleration of several sine tones sums up
- Development of method by German automotive companies Audi, BMW, Daimler, Porsche and Volkswagen in 2008

### Reference

## AK-LH1, Engine Components, November 2008

$$\text{Intervallfaktor} = \left( \frac{\text{Max\_Frequenz}}{\text{Min\_Frequenz}} \right)^{1/\text{Zahl\_der\_Spektren}}$$

Beispiel: Es soll eine Prüfung zwischen 80 und 2000 Hz mit 4 Spektren stattfinden. Intervallfaktor ist  $(2000/80)^{0,25} = 2,236$ . Die vier Intervalle sind:

Beginn des Intervalls	Ende des Intervalls
80 Hz	179 Hz
179 Hz	400 Hz
400 Hz	894 Hz
894 Hz	2000 Hz

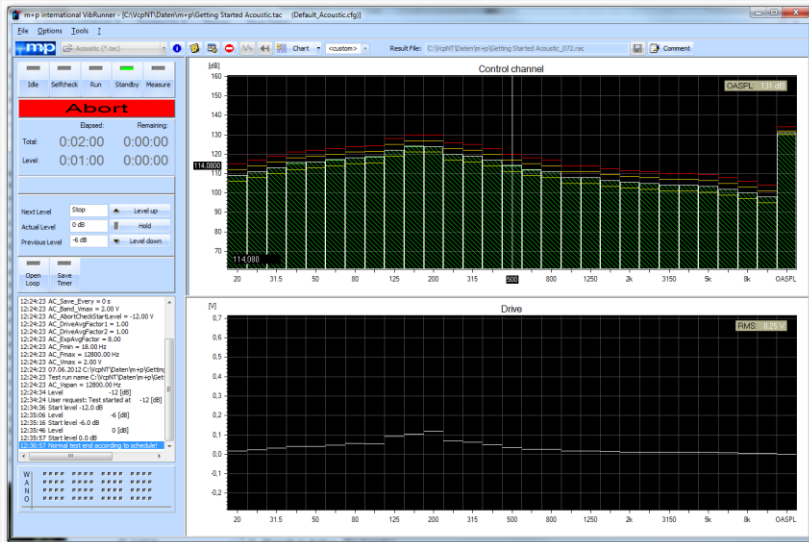

No.	Frequency			Sweep		
	lower	upper	Start	Type	Direction	Rate
1	10 Hz	17 Hz	10 Hz	Log.	pos.	1 Oct/min
2	17 Hz	29 Hz	17 Hz	Log.	pos.	1 Oct/min
3	29 Hz	49 Hz	29 Hz	Log.	pos.	1 Oct/min
4	49 Hz	83 Hz	49 Hz	Log.	pos.	1 Oct/min
5	83 Hz	141 Hz	83 Hz	Log.	pos.	1 Oct/min
6	141 Hz	240 Hz	141 Hz	Log.	pos.	1 Oct/min
7	240 Hz	408 Hz	240 Hz	Log.	pos.	1 Oct/min

Sweep rate 1 Oct./min, 10 intervals

- Overview Closed-Loop Vibration Control
- Hardware: m+p VibPilot and m+p VibRunner
- Software Features and Test Modes
- Applications
- Advanced - Time Data Recording (Throughput)
- Advanced – Notching/Force Limited Vibration Testing (FLVT)
- Advanced - Mixed Mode (SoR, RoR, SoRoR)
- Advanced – Multi-Sine
- [Advanced - Acoustic Control for Reverberant Chambers and PWT](#)
- Summary

# m+p VibControl Products Acoustic Control

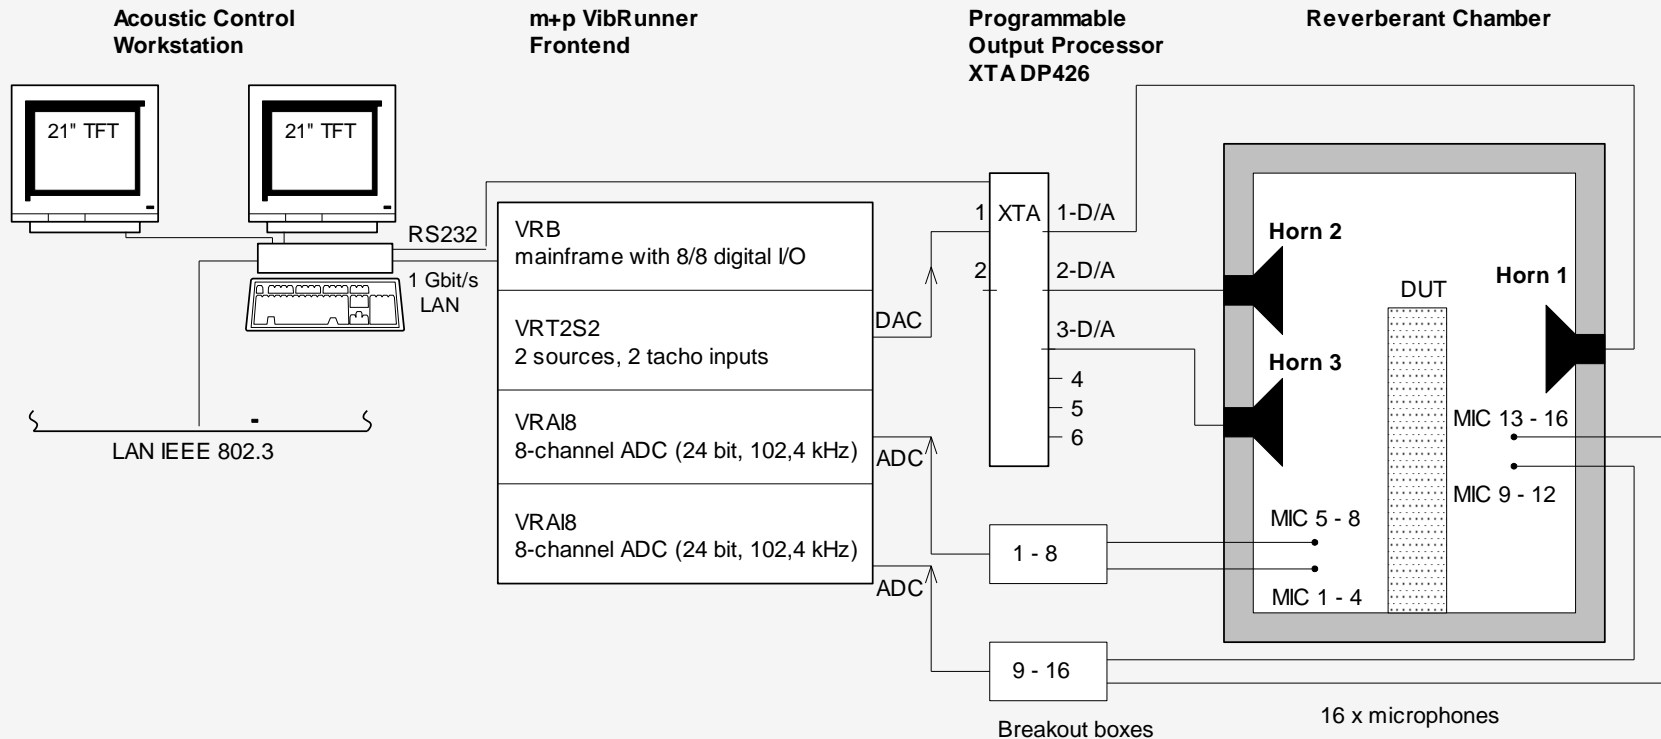

## Acoustic Control for Reverberant Chambers and Progressive Wave Tubes (PWT)

- Simulation of high-level noise in a reverberant chamber or Progressive Wave Tube (PWT)
  - Control of reference octave band spectrum and overall sound pressure level (OASPL)
  - 1/1 or 1/3 octave bands
  - 40 (and more) microphones
  - Frequency range 20 - 10,000 Hz with multi-horn control
  - Time history recording
  - Same measurement hardware and user interface as m+p VibControl shaker controller
- Acoustic control system can be easily configured as a vibration control system

# m+p VibControl Products

## Acoustic Control

Acoustic control: typical configuration using 16 channels

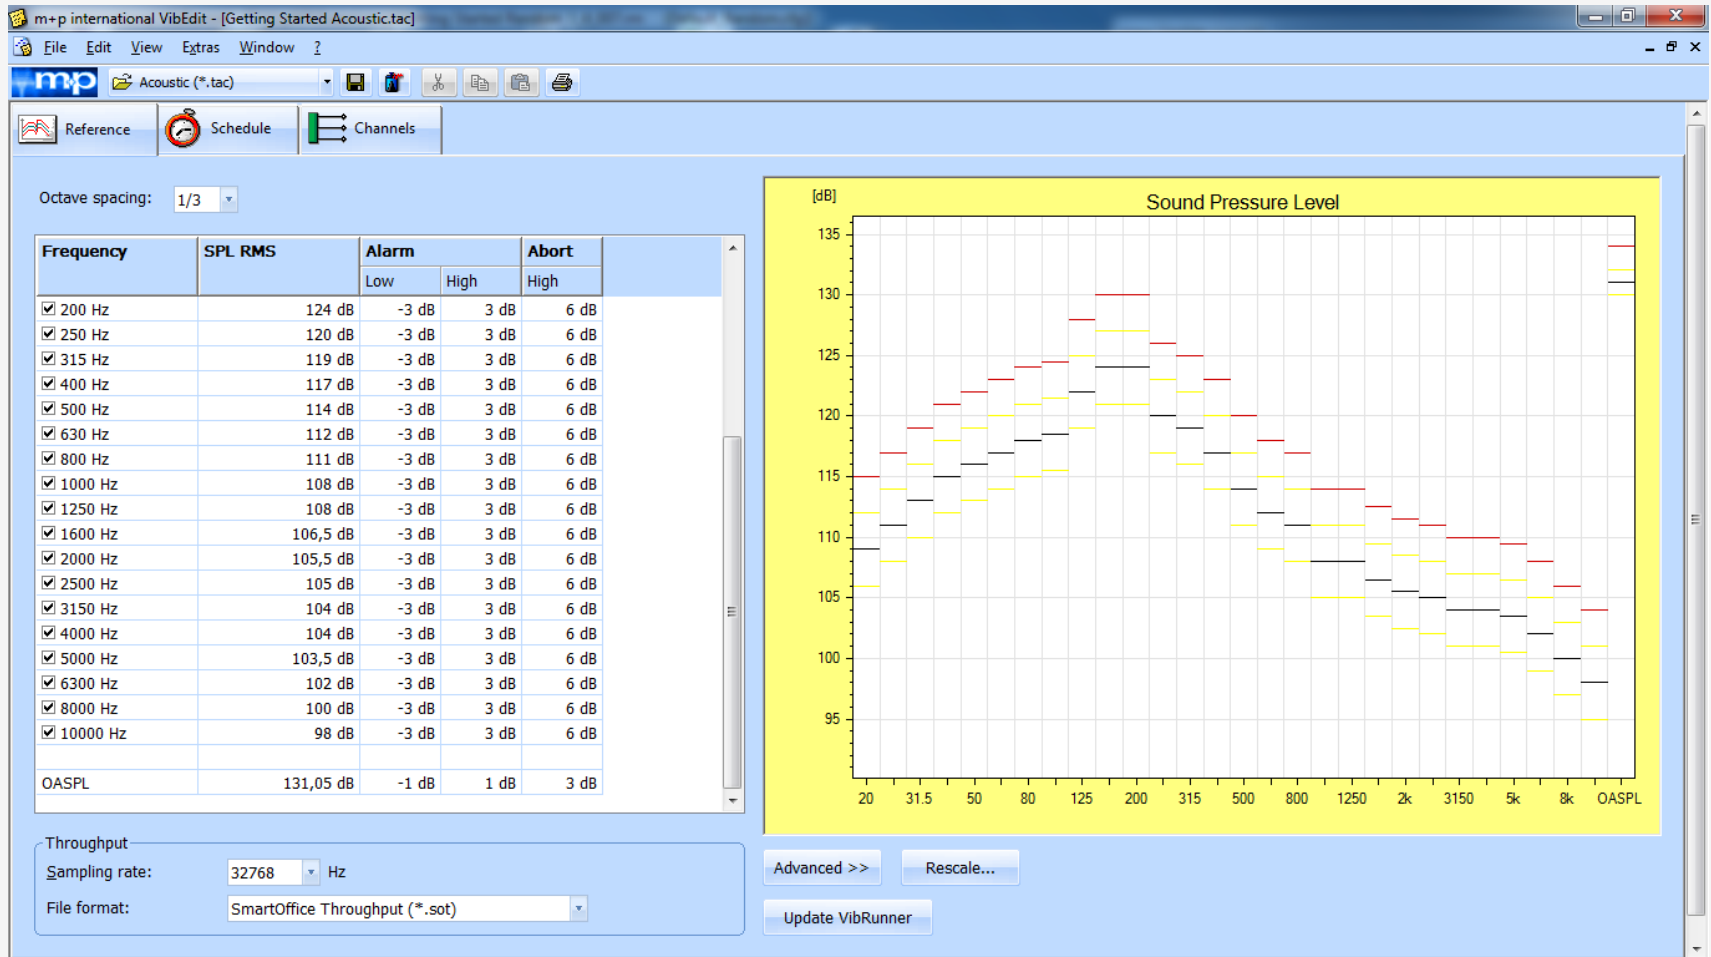

Reverberant chamber  
INPE, São Jose dos Campos, Brazil

Progressive Wave Tube (PWT)

# Why So Many Engineers Rely on m+p international

## Full-Service Provider of Test and Measurement Systems for Use

- In the test laboratory
- On the production floor
- In the field

## Complete Solutions

- Planning
- Implementation
- Installation
- Full-operational support

## Our Strengths

- Expertise, excellent service & support from m+p international engineers
- State-of-the-art software and hardware tools
- 30 years of engineering experience

# m+p VibControl Products

## ...for a Wide Variety of Test Requirements

### Leading Environmental Test Laboratories Use Systems from m+p international

- Vibration control systems from 4 to 512 input channels
- True multi-tasking: test definition, test run and post-testing in parallel
- Simple for production, advanced for R&D
- Flexible measurement hardware specially developed for vibration control
- Future-proof software, regular updates
- Common user interface across all systems
- Complete vibration test stands including shakers, transducers, etc.
- Customized test stands
- Calibration service
- m+p is independent of shaker manufacturers
- 40 years of engineering experience and know-how
